

Entity Analysis Report

Introduction

This report provides a simple entity analysis for a database design. Entities represent real-world objects stored in the system.

Sample Entities

1. Customer: CustomerID, Name, Email, Phone
2. Product: ProductID, ProductName, Price, Stock
3. Order: OrderID, OrderDate, CustomerID, TotalAmount
4. Payment: PaymentID, OrderID, PaymentMethod, Status

Conclusion

Proper entity identification helps create an efficient and normalized database.
